How to inspect AJAX requests with Chrome tools Dan Baker - 2023-09-11 - Comments (0) - General

The Deskpro interface uses a web programming technique called AJAX to allow the pages to update dynamically without the need to refresh the whole page.

Sometimes a Deskpro support agent may ask you to inspect individual AJAX requests to help diagnose a problem.

Here's how to do this:

- 1. Use the <u>Chrome web browser</u>.
- 2. Open the Deskpro interface where there's a problem.

3. Within the Chrome menu system, select **More tools > Developer tools**.

	_	New tab New window New Incognito windov	N		Ctrl+	Ctrl+T Ctrl+N Shift+N	
		History Downloads Bookmarks Google Password Man Extensions	ager	New)	Ctrl+J	•
	;	Zoom		100%	+	53	
		Print Cast Find				Ctrl+P Ctrl+F	
Save page as	Ctrl+S	More tools					►
Create shortcut		Edit	Cut		Сору	Paste	e
Name window Clear browsing data Ctrl-		Settings Help					►
Performance		Exit					
Task manager	Shift+Esc						
Developer tools C	trl+Shift+I						

4. When the developer tools console opens, click on the **Network** tab, then click **XHR** below.

5. You can now see the AJAX requests. The Deskpro agent has probably told you some steps to take and a particular request to look for. Click on an individual request to see the request details, which you should copy and send to Deskpro.
