Creating a snapshot of system setup and configuration on cloud Collecting Feedback

• James Wanless

• Forum name: #Feature Request

It would be great if there was a way to take a snapshot of the entire system configuration on cloud. There are so many details which have been changed and updated along the way that I don't even know myself if I would be able to re-build it from scratch, if someone inadvertently changed something. A simple solution to this problem would be great.

Thanks.
