

Downloading the source code of a custom app

Ben Henley - 2017-11-09 - Comments (0) - Deskpro API

If you have a custom Deskpro App installed on your helpdesk, you can always download the zipped source code by going to **Admin > Apps** and selecting the app, then clicking the **Download .zip** button.

The screenshot shows a configuration page for a custom app. At the top left, there is a yellow sticky note icon with the word "NOTE" written on it. To its right is the app name "Default to Note Tab". In the top right corner, there are two buttons: "Download .zip" and "View App". Below the app name, a message states "This app does not require any configuration." At the bottom of the page, there are two buttons: "Save" and "Uninstall App".
