

I'm having trouble getting embedded videos to work correctly

Ben Henley - 2023-08-16 - Comments (0) - Using Deskpro

Question:

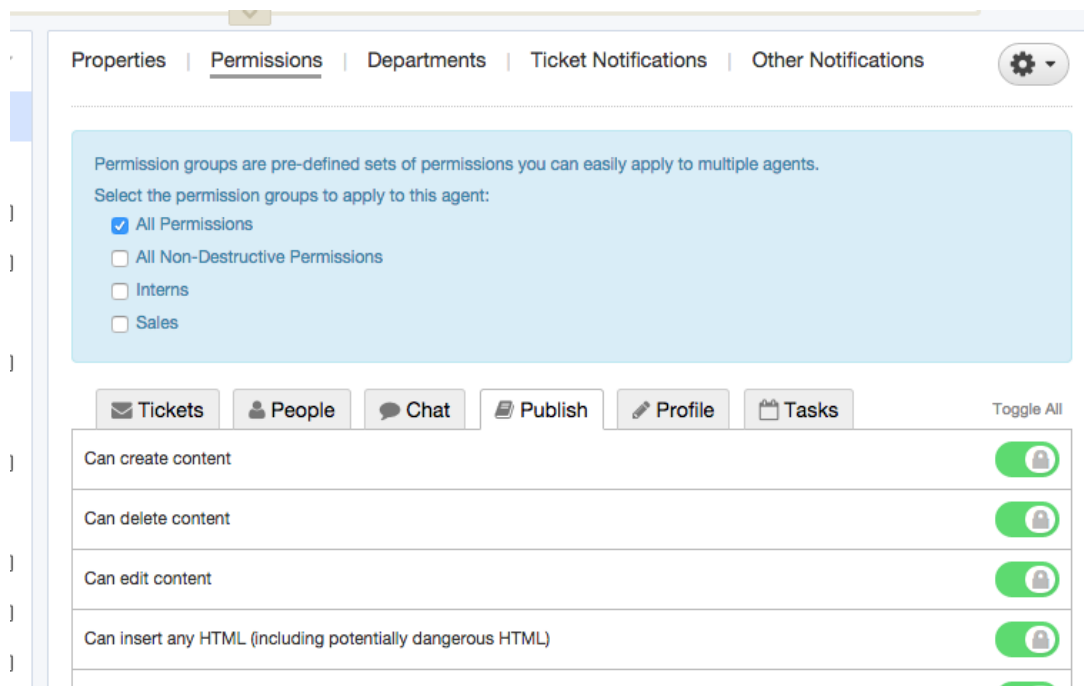

My agents used to be able to embed videos in Knowledgebase articles. Now, when they try to embed a video, it looks fine when the article is being edited, but when the article is saved, it just displays the text of the video embed code. Why is this happening?

Answer:

To embed potentially harmful code in an article (including iframes and Javascript that are often used for embedding videos or widgets), agents need the new "Can insert any HTML (including potentially dangerous HTML)" permission.

Check that agents who should be able to embed videos have this permission enabled in **Admin > Agents > Agents > Permissions > Publish.**

If not, you can either enable it for each agent, or add it to a permission group.

The screenshot shows the Deskpro Admin interface with the 'Permissions' tab selected. The 'Publish' section is visible, showing a list of permissions. The 'Can insert any HTML (including potentially dangerous HTML)' permission is highlighted.

Permission	Enabled
Can create content	Yes
Can delete content	Yes
Can edit content	Yes
Can insert any HTML (including potentially dangerous HTML)	Yes
