

Why aren't Community Channels showing up on my portal?

Ben Henley - 2019-09-10 - Comments (0) - Using Deskpro

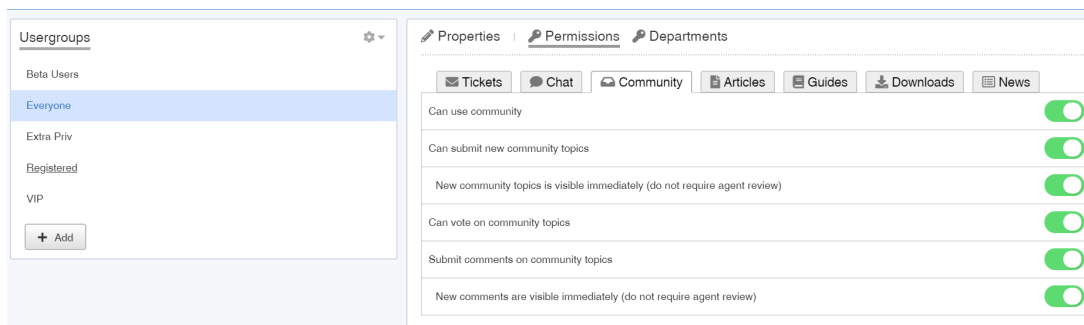

Question

On the user portal, the Community section is showing up, but no channels are available to select, and submitting the form doesn't work. What's going on?

Answer

This is a permissions problem. There are two sets of permissions that affect Community:

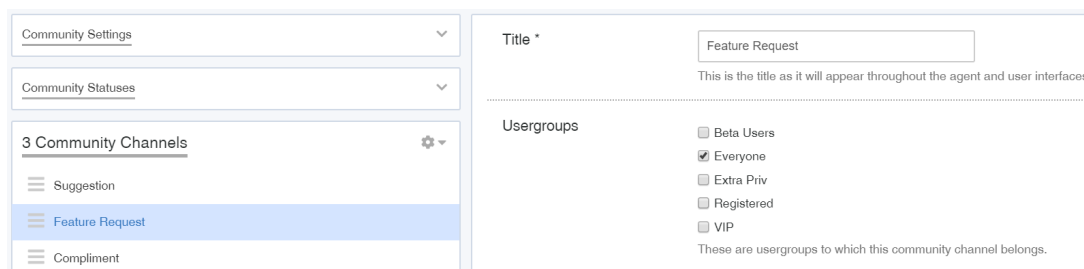

1. The usergroup permissions (**Admin > CRM > User Groups > Permissions > Community** section):

The screenshot shows the 'User Groups' section on the left with 'Everyone' selected. The main area shows the 'Permissions' tab for the 'Community' section. The following permissions are listed with their status (all are turned on):

Permission	Status
Can use community	On
Can submit new community topics	On
New community topics is visible immediately (do not require agent review)	On
Can vote on community topics	On
Submit comments on community topics	On
New comments are visible immediately (do not require agent review)	On

2. The permission settings on individual Community Channels (**Admin > User Interface > Portal > Community > Community Channels**).

The screenshot shows the 'Community Settings' and 'Community Statures' sections on the left. The main area shows the 'Community Channels' section with 'Feature Request' selected. The 'Usergroups' section is expanded, showing the following usergroups selected:

- Beta Users
- Everyone
- Extra Priv
- Registered
- VIP

These are usergroups to which this community channel belongs.

The situation above arises if the user has permission to use the Community app, but *not* to use any of the individual channels.

To fix this, go to **Admin > User Interface > Portal > Community > Community Channels** and make sure that any user who can see the Community section on the portal

can access at least one Community Channel.
