Allow redirects from archived articles to published articles Collecting Feedback

- Natalie Wlock

Allow agents to set a URL redirect on an archived article so it can point to a published article. For example, I have 4 Knowledge Base articles which are duplicates. I only want to keep 1 article published and public facing.

Would it be possible to create a way to archive 3 of the articles (so that they are not public facing) and set up URL redirects to the 1 article I will keep published and public? This is particularly useful if a user has bookmarked a link to an article that you want to archive and redirect them to a newer one without them having to find it in the search.
