The operation "billing-charges" is not available in the v2 API Collecting Feedback

- Brendan
- **Forum name:** #Bug Report

The Deskpro v2 API does not seem have an operation endpoint for "billing-charges".

The "billing-charges" operation in the v1 API does not work.

In the absence of the billing-charges operation in the v2 API, I was advised to use the v1 API operation instead. When I do this it fails.

We have an on premise solution and the v1 API docs indicate the operation is there. In using the v1 API form to test the operation it also fails.
