ticket fields possible issues Finished

When you create custom layouts for tickets. Is there a way to have the ticket show up on the agent side in the same order as it is setup when filling out the ticket. It seems to rearrange the items.
f />
 Also when you add a Multi-Select Box and have multiple choices only one choice shows up to the agent. It also only shows 1 choice to the user after they submit even though they might have selected 2 choices.

The multi-select issues have been resolved for our next build. The layout options on agent ticketview is a limitation at the moment. We'll address this soon in one of the upcoming builds.

This is fixed in the current release.
