Allow entire IP subnets in whitelist Collecting Feedback

- **Naam forum:** #Feature Request

We would like to enable IP verification for our agents, as sometimes certain agents are out of the office. But in doing so, it enables it for all agents, forcing everyone to verify their IP if they are in our office LAN. This is fine, but our PCs are on DHCP and sometimes their IP changes. We want the ability to whitelist entire IP ranges rather than just individual IP addresses.
