Image auto-resizing and lightbox functionality when creating Publish content Collecting Feedback

- JG Jason Gillan
- Naam forum: #Feature Request

We would like some features added when creating Publish content in the editor:

1. Auto resizing of images-similar to this Wordpress feature:

https://en-gb.wordpress.org/plugins/resize-image-after-upload/

That automatically created resized versions of uploaded images at 75%, 50% and 25% (I believe), this meant when showing a smaller version of the image you didn't get the weird distortion you can have when using HTML/CSS to shrink images.

2. An inbuilt way to have a sort of Lightbox functionality for images, similar to this:

https://www.w3schools.com/howto/howto js lightbox.asp

We would also like this feature to be able to zoom into images. We have allot of images of our software in our guides and not everywhere the image is big enough.

This is also a feature we would like to see. We are publishing allot of screenshots on our guides which are difficult to read now. The workaround we use is to rightclick the image and open it in a new tab.

We would really like this to be added.

Is it that hard to implement this?
