How do I run a report showing ticket activity grouped by agent and department?

John Davison - 2023-09-08 - [Reacties \(0\)](#) - [Reports](#)

To create a log of all ticket activity within a given timeframe, grouped by both agent and department, you can generate the following report.

This report will reveal a list of departments, agents within them, tickets each agent has interacted with, and the time of those interactions.

To generate this report, input the following into the query builder when using the reports interface:

1. Go to: **Reports > Stats**
2. Click + Create Statistic
3. Enter Title
4. Click the RAW DPQL tab
5. Copy and paste the following code
6. Click Save

```
DISPLAY TABLE
```

```
SELECT tickets_logs.date_created
```

```
FROM tickets_logs
```

```
WHERE tickets_logs.person.is_agent = 1 AND  
tickets_logs.action_type IN ('ticket_created',  
'message_created', 'changed_agent', 'changed_agent_team')  
AND tickets_logs.date_created = %1:DATE_GROUP%
```

```
GROUP BY tickets_logs.person.primary_team AS 'Team',  
tickets_logs.person AS 'Agent', tickets_logs.ticket.id AS  
'Ticket ID'
```

```
ORDER BY tickets_logs.person.name ASC
```

The screenshot shows a 'New Stat' configuration interface. On the left is a sidebar with navigation icons and a list of categories and counts. The main area contains a form for creating a new statistic. The 'TITLE' field is set to 'Ticket Activity'. Below the form is a 'QUERY BUILDER' section with a 'RAW DSQL' tab selected. The SQL query is as follows:

```

SELECT tickets_logs.date_created
FROM tickets_logs
WHERE tickets_logs.person.is_agent = 1 AND tickets_logs.action_type IN ('ticket_created', 'message_created', 'changed_agent', 'changed_agent_team') AND tickets_logs.date_created = %1:DATE_GROUP%
GROUP BY tickets_logs.person.primary_team AS 'Team', tickets_logs.person AS 'Agent', tickets_logs.ticket.id AS 'Ticket ID'
ORDER BY tickets_logs.person.name ASC

```

At the bottom of the query editor, there is an 'Add Variable' button and a 'Save' button.

This set of queries will include the agent activity listed in the WHERE clause, like 'message_created' for example. If you'd like to expand or change the actions that are captured by the report, refer to our [DPQL Field Reference](#).
