Dark/Night mode theming? Collecting Feedback

- Kevin Fox
- **Forum name:** #Feature Request

Any consideration to adding themes to the interface so people can change the default white an blue theme, preferably some sort of dark/night mode?

This would be nice to see built-in...I created my own dark mode and it took 3,300 lines of CSS to change everything including reports, admin, etc.

Hey Josh, Is that difficult to implement?

Please please add the ability to switch to Dark theme. We have people working 24/7 and at night it would be so much easier on the eyes thank you!!!

I know this is over a year old but we would be interested in a dark mode option as well.

Until Deskpro implement the actual dark theme, you can use extensions or force your web browser to enable dark mode for all websites by using these switches: `edge://flags/#enable-`

force-dark (Edge), <chrome://flags/#enable-force-dark> (Chrome)
