Feature request: trigger on geolocation, emailcodes for users, email tab view Collecting Feedback

- Kevin Neufeld
- Forum Navn': #Feature Request

If possible we would like to see: - add trigger based on geo-loaction on webGUI (auto populate fields, and other triggers) - some support for emailcode for users on new email. #dep #agent #custom_fields UX: email tab: currently is displays a small portion of the subject line, would like option to display ticketID# instead.
