

## How can I make agents record a solution for each ticket?

Ben Henley - 2023-08-31 - Kommentarer (0) - Deskpro Legacy

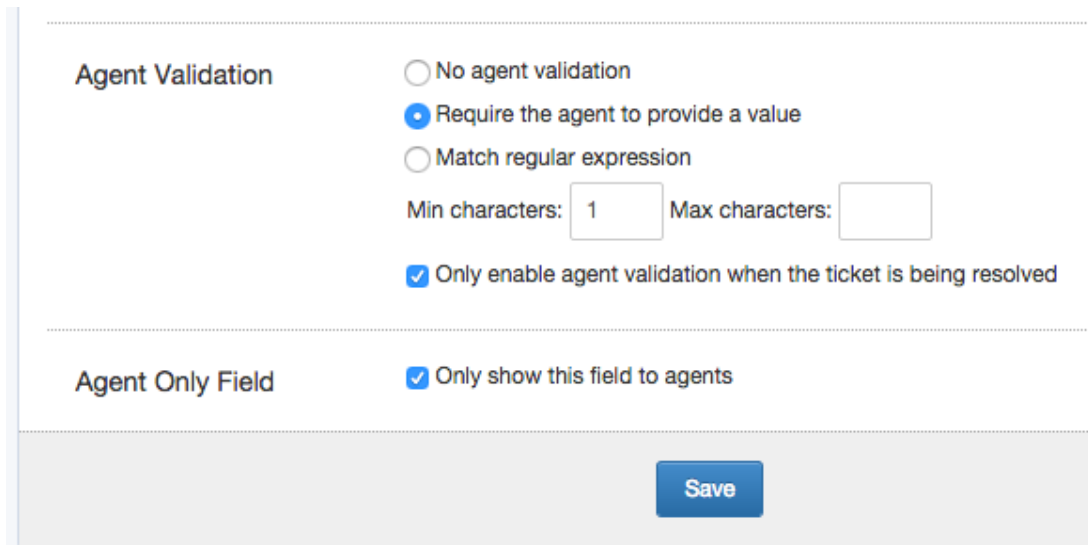

### Question:

I would like to make my agents record how each ticket was resolved. Is there a way to add a compulsory 'Solution' field to Deskpro that is required to resolve a ticket?

### Answer:

You can implement this easily using a custom ticket field.

1. Go to **Admin > Tickets > Fields**.
2. Click **Add**.
3. Select a **Single-Line Text Box** or **Multi-Line Text Box** depending on how long a description you want agents to enter (or you could create a multiple-choice field using **Predefined Choices**).
4. Select **Require the agent to provide a value** and **Only agent validation when the ticket is being resolved**.
5. You don't want users to see this field on the portal, so select **Only show this field to agents**.

The screenshot shows a configuration panel for a custom ticket field. It is divided into two sections by a horizontal dotted line. The top section is titled "Agent Validation" and contains three radio button options: "No agent validation", "Require the agent to provide a value" (which is selected), and "Match regular expression". Below these options are two input fields: "Min characters:" with the value "1" and "Max characters:" with an empty field. A checked checkbox option "Only enable agent validation when the ticket is being resolved" is located below the input fields. The bottom section is titled "Agent Only Field" and contains a checked checkbox option "Only show this field to agents". At the bottom center of the panel is a blue "Save" button.

6. Click **Save** and head to Tickets > Departments > Layout if you would like this to only appear on tickets for certain departments.
