Deskpro 2022.1.0 Release

2022-03-09 - James Godwin - [Kommentarer (0)](#) - [Deskpro Releases](#)

We are pleased to announce the release of **Deskpro version 2022.1.0**. This is a bugfix release.

Bug Fixes

- SC - 63890 - Move Google fonts loading to product and allow to disable it

- SC - 64608 - Add an existing user as a CC, then add a new user as a CC, receive an incorrect error message pop up

- SC - 64116 - Missing attachment source_ref's

- SC - 61472 - Help Center Theme - switch from legacy portal to new help center theme not changing

- SC - 56399 - HELP CENTER - Calendar pop up selection does not update field on user form

- SC-62064: 500 error in some cases when using the API to create new tickets.

- SC-62069: Temporary blobs being served after being abandoned. This could be abused to upload files that agents couldn't delete easily, but with permalinks that would still work. See [this KB article](#) for a fuller explanation and mitigations to handle pre-existing temp blobs.
