Restrict the Agent and Agent Teams that can be selected in the ticket assignment drop-down menus Collecting Feedback

- AS Ahmad Sahrizal
- **Nazwa forum:** #Feature Request

Dear Deskpro,

We'd like to be able to restrict what agents can select in these drop-downs:

The screenshot shows a web interface with three tabs at the top: 'PROPERTIES', 'TASKS (0)', and 'SLAS'. Below the tabs, there are two drop-down menus. The first menu is labeled 'Agent · Unassign' and shows a crown icon followed by '(200) Ahmad Sahrizal'. The second menu is labeled 'Team · Assign to My Team · Unassign' and shows a person icon followed by 'L1 - HAI DJPb'.

For example:

Agent A is included in Team 1 (consist of A and B) and Team 2 (A and C), so A have ability to assign ticket only to his team (Team 1 and Team 2)

and to Agent Member in his team (A, B, C).

In additions, I think it will be nice if Deskpro can separate Agent based on brand. so if Agent Layer 1/First Line Agent that receives ticket first from user, they can escalate ticket only to Agent that belong to his/her brand.

When assigning a ticket to an agent, we want to be able to set it so that the agent can only see team members or agents who have access to that department. Thank you!

We would like to have the option of creating multiple Agents lists/groups for other Agents to choose from. For example, Agents in Group 1 will only have the option of assigning tickets to Agents in Group 2, etc. They would not be able to see any other Agent not in that group. Thank you.
