# How do I remove the Messenger Widget from the Help Center but keep for other sites?

Matthew Watt - 2023-08-17 - [Komentarze \(0\)](#) - [Help Center](#)

You can remove the chat widget from the Help Center, but keep it on other sites you have embedded in on by editing the Help Center Templates.

In Admin, go to **Help Center > Help Center Design**, scroll down to the **Template Editor** section, and select **Open Template Editor**

The screenshot shows the Deskpro Admin interface. On the left, there's a sidebar with icons for ITIL Configuration, Help Center Design (which is highlighted with a red box), Knowledgebase, News, Files, Community, Guides, and Settings. Below these are sections for Ticket Structure and Features. On the right, there's a 'Header & Footer' section with 'Edit Header' and 'Edit Footer' buttons, and a 'Header Include' button. Under 'Home', there's a 'Edit Homepage Template' button. Under 'CSS', there's a 'Edit Custom CSS' button. At the bottom, there's a 'Template Editor' section with a 'Open Template Editor' button (also highlighted with a red box), a 'Save' button, and a 'Discard Changes' button. In the bottom left corner of the main area, there's a user profile for 'Lara Proud' with a count of '221 B H...'.

At the top of the template editor, select and edit the **body-include.html** template inside **Internal**.

## Help Center Design > Templates

start" in document.documentElement) {  
body-include.html  
uch-device';  
-touch-device';  
custom-footer.html  
custom-head-include.html  
custom-header.html  
portal mode() != 'fame-em

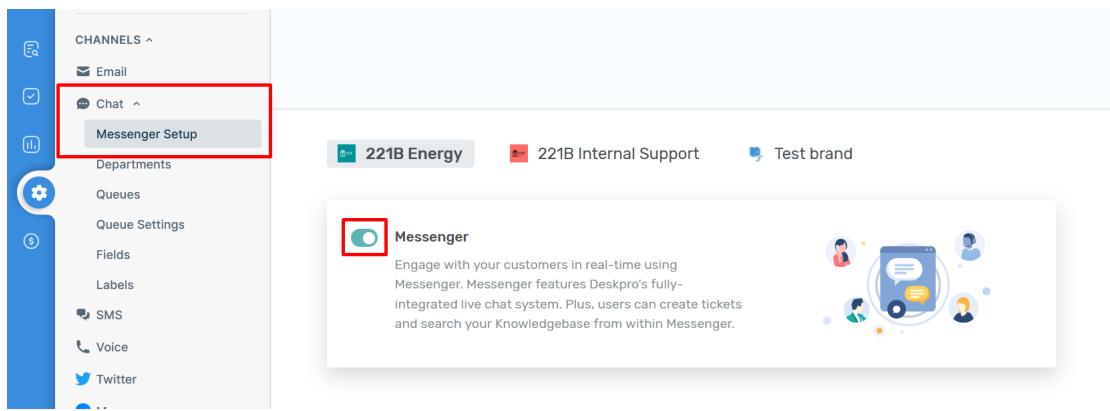

At the bottom of the template you'll see a section you will see the following line:

```
[% if portal_mode() != 'focus-window' and portal_mode() != 'fame-embed' and is_portal_widget_enabled() %]{% portal_widget_loader() %}{% endif %}
```

Simply remove this line of code and press **Save**. Make sure to press '**Save**' in the main editor to ensure the widget is removed.

### Note

If you wanted to disable chat everywhere, you could disable it from **Admin > Channels > Chat > Messenger Setup** and then turn off the Messenger widget by clicking on the toggle.

The screenshot shows the Deskpro interface with a sidebar on the left containing various channel options: Email, Chat, Departments, Queues, Queue Settings, Fields, Labels, SMS, Voice, Twitter, and a '...' option. The 'Chat' option is expanded, and 'Messenger Setup' is selected, both of which are highlighted with a red box. The main content area shows three tabs: '221B Energy' (selected), '221B Internal Support', and 'Test brand'. Below these tabs is a section titled 'Messenger' with a description: 'Engage with your customers in real-time using Messenger. Messenger features Deskpro's fully-integrated live chat system. Plus, users can create tickets and search your Knowledgebase from within Messenger.' To the right of the text is a small icon depicting a smartphone with a speech bubble and several user icons.

That would disable chat on the Help Center *and* on any websites where you had embedded the Chat Widget. The advantage of the method explained in this article is that it removes chat from the Help Center only.
