Deskpro Search Metadata Description Collecting Feedback

- Alexander Lloyd Clemons
- **Nome do fórum:** #Feature Request

Currently, when searching for a word/phrase using the Search feature, the results which are displayed show only the title of the articles in which that word/phrase is contained.
It would be great if when searching for the word/phrase of the text in the article/news/guides, there would be snippets of sentences from the articles (metadata description) in which that word/phrase is contained displayed and highlighted.
