Can I use Deskpro automation for integration with JIRA? Ben Henley - 2023-08-29 - Comment (1) - Deskpro Legacy

The updated JIRA integration app adds support for creating triggers that respond to JIRA events and create comments within JIRA.

To enable these, you must <u>install the latest JIRA app</u>. (If you are on Deskpro On-Premise and are running build #383 or earlier, you must first update your helpdesk).

You will find JIRA events filter settings under the **By an app** category.

You will be able to use the following criteria for triggers:

| JIRA             |  |  |
|------------------|--|--|
| New JIRA Comment |  |  |
| Issue Status     |  |  |
| New Linked Issue |  |  |
|                  |  |  |

There will also be an automation action to add a JIRA comment to all linked issues on a ticket.
