How do I limit agent access to tickets by department? Ben Henley - 2023-09-12 - Comentário (1) - Deskpro Legacy

One function of departments is limiting agent access to tickets.

For example, you can set up your helpdesk so that your support agents only have access to tickets in the Support department, while your sales staff can only access tickets in the Sales department.

You implement this using **agent permission groups** to set department permissions; you can manage them from **Agents > Permission Groups** in the admin interface.

By default, all your agents are part of the built-in All Permissions and All Non-

Destructive Permissions groups, which provide access to all departments, and can't be edited. Therefore, to set up selective department access, you need to remove your agents from those groups.

ts	
ission groups like this one.	
Assign	Full
	ission groups like this one. permission group instead. Assign

Select the **All Permissions** group **Properties** tab and remove all the agents who should have limited department access by unselecting the checkboxes. Repeat for **All Non-Destructive Permissions**.

Properties & Permis	ssions 🧠 Departments
	on group that grants all permissions to members I access to the agent interface, including access to
Group Name	All Permissions
Members	 Abed Syrah // Annie Golding // Jeff Rosti // Maria Cama //

Now you need to grant back all the permissions you have just removed, except that you will grant full access to each department selectively.

There are two ways to do this:

1. Create several different permission groups, each one granting access to a different department (as well as all the other permissions your agents need). If you have a lot of agents to manage relative to the number of departments, this is the best option.

For example, you could create permission groups with Sales department access and Support department access.

Properties	Permissions Q Departments	
Tickets	Chat	
Department		Assign Full
Support	Sales permission group	
Sales		
Tickets	Chat	
Department		Assign Full
Support	Support permission group	
Sales		

You can then assign agents to the appropriate permission group to give them either Sales or Support access.

Group Name	Sales
Members	 Abed Syrah Abed Syrah Annie Golding Seff Rosti Arria Cama Samuel Blix

2. Create a single permission group with no department permissions (but all the other permissions your agents need), then grant department permissions from individual agent profiles. This may be quicker if you have a low agent:department ratio, e.g. you only have one agent per department.

In this case you would assign all your agents to the same permission group, then set their department permissions individually.

perties Permissions Departments	Ticket Notifications	Other Notification	ns 🔅
Permission groups are pre-defined sets of permission:	s vou can easily apply to mu	Itiple agents.	
select the permission groups to apply to this agent:	,,,,		
All Permissions			
All Non-Destructive Permissions			
All Permissions except Departments			
Tickets Chat			
Tickets Chat		Assign	Full
		Assign	Full
Department		Assign	Full

Notes

1. For departments where the agent doesn't have full access, you can choose to grant 'assign' access. This means the agent is allowed to assign a ticket to that department, but nothing else: so after they assign the ticket, they won't be able to see it.

 You can see which permission groups and individual agents have access to each department by going to **Tickets > Departments**, and looking at the departments' **Permission** tabs.

This is helpful to me and easy to implement. Is there a way of restricting Agents seeing certain Users in the CRM side of the system?
