How do I run a report showing ticket activity grouped by agent and department?

John Davison - 2023-09-08 - Comentários (0) - Reports

To create a log of all ticket activity within a given timeframe, grouped by both agent and department, you can generate the following report.

This report will reveal a list of departments, agents within them, tickets each agent has interacted with, and the time of those interactions.

To generate this report, input the following into the query builder when using the reports interface:

- Go to: Reports > Stats
- 2. Click + Create Statistic
- 3. Enter Title
- 4. Click the RAW DPOL tab
- 5. Copy and paste the following code
- 6. Click Save

```
DISPLAY TABLE
```

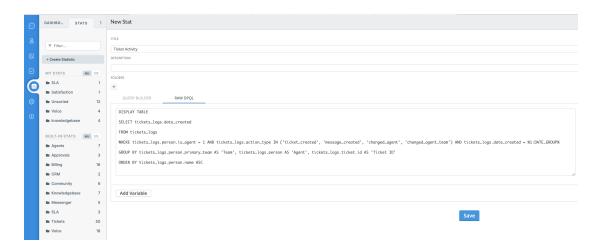

SELECT tickets logs.date created

FROM tickets logs

WHERE tickets_logs.person.is_agent = 1 AND tickets_logs.action_type IN ('ticket_created', 'message_created', 'changed_agent', 'changed_agent_team') AND tickets logs.date created = %1:DATE GROUP%

GROUP BY tickets_logs.person.primary_team AS 'Team',
tickets_logs.person AS 'Agent', tickets_logs.ticket.id AS
'Ticket ID'

ORDER BY tickets logs.person.name ASC

This set of queries will include the agent activity listed in the WHERE clause, like 'message_created' for example. If you'd like to expand or change the actions that are captured by the report, refer to our DPQL Field Reference.
