## Nested IF or CASE in stat builder Collecting Feedback

JK Jenny Kongkalai •  
اسم المنتدى: # Feature Request

I would like to be able to use CASE in the SELECT statement for DPQL

I want the channel to display differently, i.e. instead of gateway.person, it will display as "user email" instead

:Example

```
SELECT DPQL_COUNT(),
CASE
  WHEN tickets.creation_system = 'gateway.agent' THEN 'agent email'
  WHEN tickets.creation_system = 'gateway.person' THEN 'user email'
  WHEN tickets.creation_system = 'web.agent.portal' THEN 'agent interface'
  WHEN tickets.creation_system = 'web.person.portal' THEN 'user via portal'
  ELSE 'Others'
END AS 'Channel'
FROM tickets
WHERE tickets.date_created = ${date}
GROUP BY tickets.creation_system
```
