

Deskpro 5.12.1 Release

2017-11-22 - Colin Dunn - Comments (0) - Release Announcements

We're delighted to announce the release of Deskpro 5.12.1

Deskpro 5.12.1 includes a range of general bug fixes and improvements to our new beta features. We have also bundled in some API advancements.

General Fixes and Improvements:

- Fixed memory exhaustion errors related to CSV Imports
- Keyboard shortcuts no longer incorrectly being triggered when in internal agent IM window
- Bug fixes to current reporting system which caused issues cloning or creating current reports
- Banned/disabled users could still access portal - these are now shown a denied entry error
- Timestamps on knowledgebase articles now show the date they were last updated.
- Improved quality of error reporting regarding email accounts running on Exchange Web Services
- Improved interface performance when working on a helpdesk view with a lot of custom ticket filters

New feature improvements:

- Resolved bug where our new [Guides](#) system appeared blank if the helpdesk was configured in one single language
- Improvement to new [Follow Ups](#) feature to improve macro handling in follow up tasks.

API:

- Trouble sending certain arrays of data through the API Sandbox resolved
- Fixed calls to the user_groups table through the V2 AP
- General improvements to API and Twig (email/portal template) behaviour
- Added following API calls to V2 to retrieve attachments:
 - GET /tickets/{id}/attachments
 - GET /tickets/{id}/messages/{mid}/attachments
