

Zapier Helpdesk Integration with Deskpro

2017-03-13 - Lauren Cumming - Comments (0) - Product

The Zapier helpdesk integration with Deskpro is now available on your helpdesk (v5.4 and above).

[Zapier](#) is an automation tool that connects all of your various apps together. Now Zapier works with Deskpro too! You can set up automations for events like new tickets, ticket updates, new people, and new organizations. For example, whenever a new ticket enters a certain filter, maybe you want to create a new Trello card.

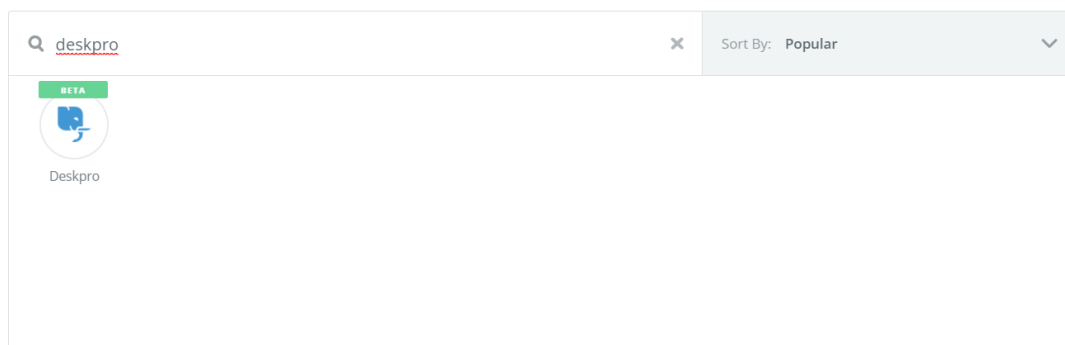

This also works the other way. Configure Zapier to perform Deskpro actions in response to other apps. For example, when a Wufoo form is submitted, create a ticket in Deskpro.

The Deskpro Zapier integration is in beta, but is now generally available and discoverable from within the Zapier platform itself - simply search for 'Deskpro' in the app directory.
