

iCal Sync for News on Deskpro Help Center

Kim Triel - 2024-08-01 - Comments (0) - Using Deskpro

Deskpro Help Center offers a feature that lets you sync your news articles with your calendar via iCalendar. This functionality makes it easy to keep track of important updates and events directly in your preferred calendar app.

To use this feature, simply go to your news page and click on the calendar icon:

You'll then download the iCalendar file, which can be imported into most major calendar apps, including Google Calendar, Apple Calendar, and Microsoft Outlook.

This feature allows you and your users to conveniently integrate your news posts as events into their calendar, ensuring everyone stays updated with important information.
