I'm having trouble with some of our Help Center missing

James Godwin - 2023-08-29 - Komentarjev (0) - Help Center

By default, the Help Center has buttons for Knowledgebase, Guides, News, Community, Files, and Contact Us (Your Ticket Submission Form):

1 221B Energy Helpdesk		■ English 🛩 Contact Us Log in
	Q How can we help you today?	
	Community Guides Knowledgebase News Co	intact Us
	NOV 4 Live Chat Hours are Charging! We created and file that Hours are	oct 18 S A E E

If one of the sections is not appearing on the Help Center, and you don't know why, try the following steps in order.

If a section's tab is present but its *content* is not appearing - e.g. you have created articles or files in the agent interface, but they are not shown on the Help Center, skip to **Missing content**.

Try different accounts

Verify that you can't see the section even when logged in with your admin account. If the section is visible to you, but not to some users, skip to **Check usergroup permissions**.

Check the Help Center Setup

The missing section may have been disabled in Admin, go to the Admin > Help Center > Configuration page.

Check the toggle for the missing section, if the toggle is in the OFF position then the section has been disabled. Click the toggle to enable the section then click save.

Check that the section tab is enabled

Look at the individual settings for the missing section, e.g. **Admin > Help Center > Knowledgebase > Settings.**

You will see options to **Enable** and **Disable the ... section** - these are linked to the **ON/OFF** toggle in the Help Center Setup, so should already be enabled.

Under these is an option to enable the **Knowledgebase tab** in the shortcut bar. If this is not enabled, the section will be available at its URL, but will not be shown on the navigation tabs on the homepage.

Check usergroup permissions

Access to the different Help Center sections can be restricted via usergroup permissions. If the permission is disabled for **Everyone** it won't even be visible to agents.

Go to Admin > CRM > Permission Groups, and select the "Everyone" group.

Look at the permissions for the missing section (note that **Publish** controls the Knowledgebase, and **Tickets** controls the Contact Us form).

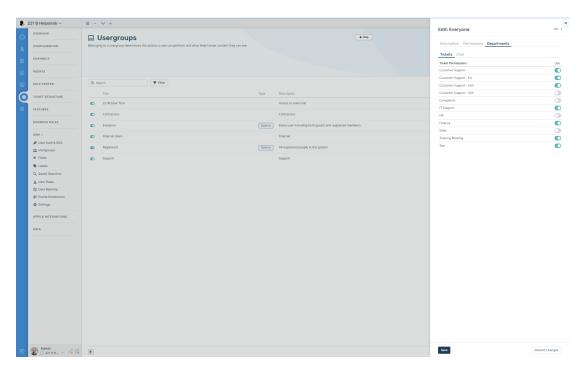

Make sure the **Can use [section]** permission is enabled. This should make the section visible to all agents and users.

Check department permissions

There are separate usergroup and agent permissions for departments, set from **Tickets > Departments** in the **Permissions** tab.

If the Contact Us form is not visible, check the **department usergroup** permissions. To be able to use the Contact Form, a user or agent must have usergroup permissions for at least one department; otherwise, the whole section will not show up.

If both **Everyone** and **Registered** are disabled for all your departments, your agents won't be able to see the Contact Form section, even if they have agent permissions for a department.

Missing content

Missing form fields

If part of the **Contact Us** ticket submission form is missing, or users can't see a field when they view a ticket through the Help Center, this may be down to the Ticket Department Form's layout. Go to **Admin >Ticket Structure> Departments**, click on the **Forms** tab and add the field you want to see to the form. Click the gear icon on a field to check that it is set to be displayed during ticket creation.

Missing articles, downloads, news posts

Check that the content you expect to see is definitely **Published**, rather than Unpublished, Archived, or Drafted.

If a section's tab is enabled, but the content you've created for the section is not showing up, check the **category permissions**.

۲	👗 🕘 221 B H., 👻 🖓				

Enable the Everyone permission and see if the items are now visible.

Note that if the *usergroup* permission for **Everyone** is disabled, and the *category* permission is enabled for **Everyone**, the category content will not show up. Disable the Everyone category permission to fix this issue.

If changing category permissions does not work, go to **Admin > Help Center > Design > Templates** and check that the templates for the problem section have not been edited in a way that is stopping content from being displayed. Possible causes include an error in template tag logic, or the use of HTML comment format (<!--->) instead of Twig comment format ({ # #}).

If you're not familiar with HTML and the Twig template system, load the template for the problem section. Check if it has been customized and if so remove customization.
