Showing the date of a Feedback Post not only in the main list Collecting Feedback

- File not found error message
- **Forum name:** #Feature Request

It would be useful if the Date of a Feedback Post would be shown not in the main list only, but inside of the post also.

When I search for something i get the the relevant items for instance from the feedbacks.

When I choose one of them, there is no information when that post was born so I can't be sure its relevance considering the time.
