Average time till first response Christine Loh - 2023-09-08 - Kommentarer (0) - Deskpro Legacy An overall average time till first response report can be generated using the DPQL below: SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in hours' FROM tickets

For a specific timeframe, a variable can be added, which allows the flexibility of choosing a specific timeframe. This can be done by first clicking on 'Add Variable' and filling in the details as follows:

| ID AS \${date} | |
|----------------|---|
| date | |
| ТҮРЕ | |
| Date | • |
| DEFAULT VALUE | |
| last year | - |

Once the variable is added, you could add a WHERE clause, which is used to limit the data displayed or used. In this example, a DPQL form can be written as shown below:

SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in hours'

FROM tickets

WHERE tickets.date_created = \${date}

This data can be further grouped by agent , as shown below:

SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in hours'

FROM tickets

WHERE tickets.date_created = \${date}

GROUP BY tickets.agent
