How do I manually run the email processing command ?

Sangeetha Lakshminarayana - 2025-11-14 - [Yorumlar \(0\)](#) - [Sysadmin](#)

Sometimes you may want to manually run incoming email processing: for example, to debug connection problems.

Email processing can be done from the command line using the below command:

```
opc inst -i helpdesk.php -- dpv5/bin/cron --verbose -f --job=process_email_gateways
```

The --verbose flag tells Deskpro to output lots of debug output.
