Question:

Is there a way to show users which agents are following a ticket?

Answer:

You can retrieve the followers for a ticket within the email templates using `ticket.getAgentParticipants()`. This example code loops through the list of following agents and displays their names and email addresses:

```
{% for agent in ticket.getAgentParticipants() %}
{{ agent.display_name }} ({{ agent.primary_email.email }})<br/>
{% endfor %}
```

You could add the same code to the portal ticket management pages to display a list of following agents - add it to the `view.html` template under Tickets.
