Group and access Queues with more flexibility

2023-07-11 - Lara Proud - [Yorumlar \(0\)](#) - [Product \(Agent\)](#)

We are thrilled to announce an exciting enhancement to our ticket organization feature that will significantly improve your workflow.

You now have the ability to group Ticket Queues using the new visual Grouping Filters. This feature provides a visual grouping of Ticket Queues, enhancing organization and providing a comprehensive view of ticket distribution across different groups.

To utilize this feature, simply apply a Group to a Queue and select the filter icon next to the Group option. This will display the grouping in Bubbles at the top of the Table View.:

The grouping possibilities with this new feature are extensive with the ability to view groups by Ticket Properties, Ticket Dates and Times, and Ticket Custom Fields. For full list options, view the [Agent Guide](#).

The image shows a screenshot of a ticket queue interface. At the top, there is a horizontal bar with a list of agents and their respective ticket counts: All (286), Arlene McCoy (5), Brooklyn Simmons (6), Cameron Williamson (32), Candy Miles (17), Darrell Steward (21), Jerome Edwards (3), Kristin Watson (7), Ralph Edwards (14), Ralph Edwards (35), Jenny Wilson (52), Marvin McKinney (9), Jane Cooper (1), Ralph Edwards (31), Jenny Wilson (6), Marvin McKinney (9), Ralph Edwards (27), and Kalel Lee (11). Below this bar is a table with columns: ID, Subject, User, Agent, and Last Reply. The table is grouped by agent, with expandable sections for Arlene McCoy (2), Brooklyn Simmons (6), and Cameron Williamson (32). Each section contains a list of tickets with their IDs, subjects, users, and last replies.

ID	Subject	User	Agent	Last Reply
Arlene McCoy (2)

Within the Ticket Queue, you will find a list of tickets grouped according to your selection. By choosing a specific

item in the group, such as an agent's name, you can load a view that only displays their associated tickets. Deselecting the agent will restore the full grouped queue.

We believe that this improved ticket organization feature will revolutionize the way you manage your tickets, providing you with greater flexibility, efficiency, and control. Try it out and experience the power of enhanced ticket filtering and grouping.
