## New Feature: Per-User and Per-Organization Fields

2014-11-06 - Ben Henley - [Yorumlar \(0\)](#) - [Product](#)

DeskPRO already supports custom fields stored about your users. They work fine if you want to record information that can have the same range of values across all your users: their shoe size, or their birthday.

But what if you want a field that has different predefined values for *each* user?

Suppose you sell custom pet accessories, and you want to record which pet a ticket is about. The possible values for User A might be "Fido" and "Tigger", whereas those for User B could be "Shadow" and "Felix". A normal custom field won't work.

Now you can handle this sort of information with **per-user custom fields**. You can create a field that has different possible values for each user and edit them on the user profile.

The image shows two side-by-side user profile cards. The left card is for user #3 Adam Every, and the right card is for user #4 Eve Adamski. Each card has a profile picture placeholder, a name, and a gear icon for settings. Below the name is a button labeled 'Add a label'. Underneath are four buttons: 'Create Ticket', 'Merge', 'Login As User', and 'More'. The main content area is divided into two sections: 'SUMMARY' and 'PROPERTIES'. The 'PROPERTIES' section has a 'Cancel' and 'Save' button in the top right. In the 'PROPERTIES' section, there is a 'Timezone' dropdown menu set to 'UTC'. Below that is a 'Pets' field with a list of predefined values. For Adam Every, the list contains 'Fido' and 'Tigger'. For Eve Adamski, the list contains 'Shadow' and 'Felix'. At the bottom of the 'Pets' field, there is an input field labeled 'Enter a title...' and an 'Add' button.

When your users submit a ticket from the portal, they can select from their own, personalised values, or even update them.

And of course, we've added **per-organization fields** too. You could use them to record buildings in an organization, the server or domain a software problem relates to - whatever information you need to track with different values for each user organization you deal with.
