Snippet variables now support more custom fields

2023-02-14 - Lara Proud - Yorumlar (0) - Product (Agent)

We've added support for more custom field types to be inserted as variables when using Snippets.
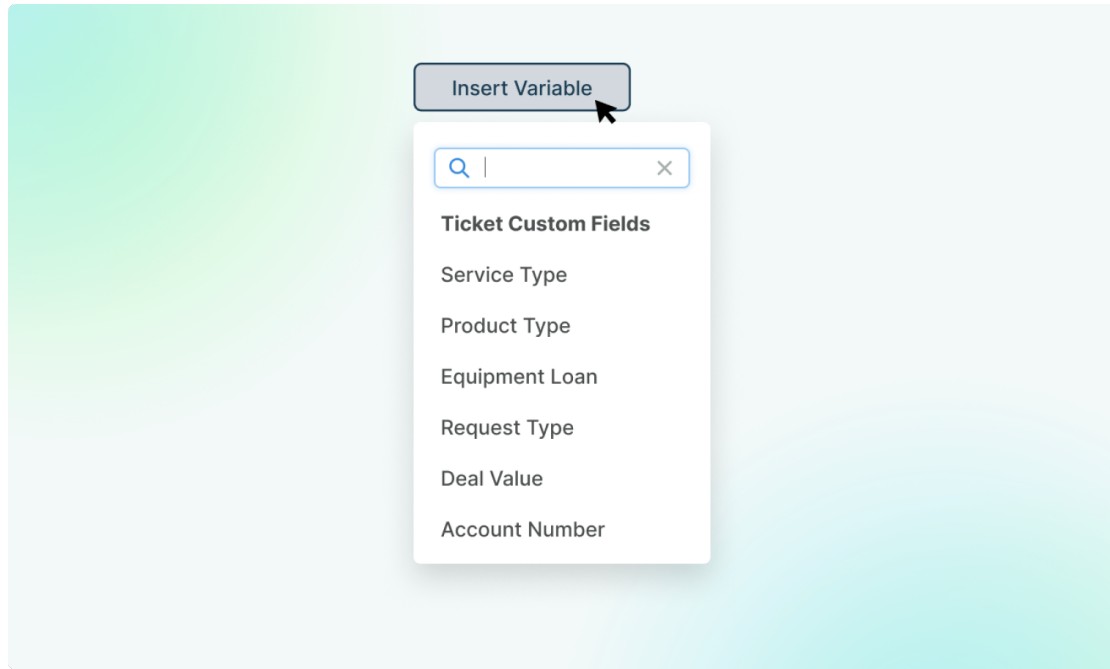

So you can now create a Snippet with variables that will insert different field types. The following list details the different field types and the values that can be inserted:

- **Single-line Text**

- **Multi-line Text**

- **Number**

- **Select**

   - **Single-select**

   - **Multi-select**

- **Toggle**

- **Date**

- **Date & Time**

- **Hidden**

- **URL**

- **Currency**

- **File**

To see what values will be inserted into the message when using the variable, see the [Snippet Variable](#) section of the Agent Guide.
