

## How do I install the 'Resolve User Hostnames' app

Ben Henley - 2018-05-14 - Comments (0) - Deskpro Apps

To install Resolve User Hostnames:

1. Go to **Admin > Apps**, select **Resolve User Hostnames**, then click **Install**.

The screenshot shows the configuration page for the 'Resolve User Hostnames' app. At the top left is a globe icon and the app name 'Resolve User Hostnames'. At the top right is a 'View App' button. The page is divided into sections:

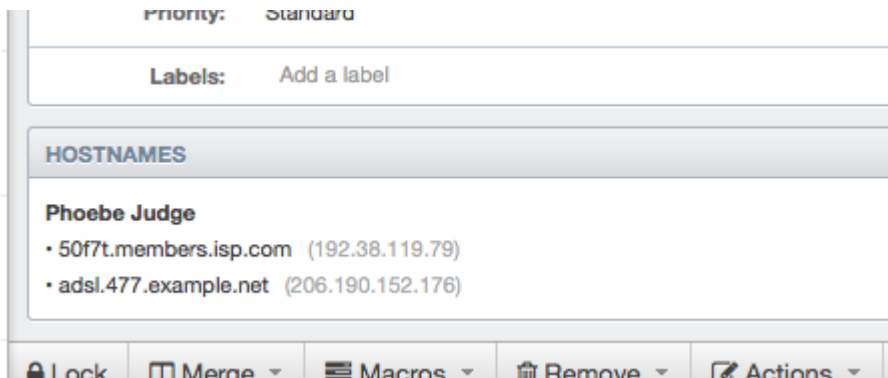

- Permissions:** Two radio buttons. The first is selected: 'This app will be enabled for everyone in the agent interface'. The second is 'Only show this app for specific agents or permission groups'.
- DNS Server:** A text input field containing '8.8.8.8'. Below it is a note: 'Enter the IP address of a DNS server to perform IP address lookups against. You can use Google's DNS at 8.8.8.8 or OpenDNS at 208.67.222.222.'
- Show Summary:** A checked checkbox 'Show summary under properties box'. Below it is a note: 'When enabled, a summary of IP addresses and hostnames for all messages in a ticket will appear at the top of the ticket in the properties box. Otherwise, hostnames will only appear in the tooltip that appears when you hover your mouse over the time in each message.'
- Show Summary with Agents:** A checked checkbox 'Enable agents'. Below it is a note: 'When enabled, hostnames for agent messages will also appear in the summary box (the above option). If disabled, only user hostnames will appear.'

At the bottom, there are two buttons: 'Save' (blue) and 'Uninstall App' (red).

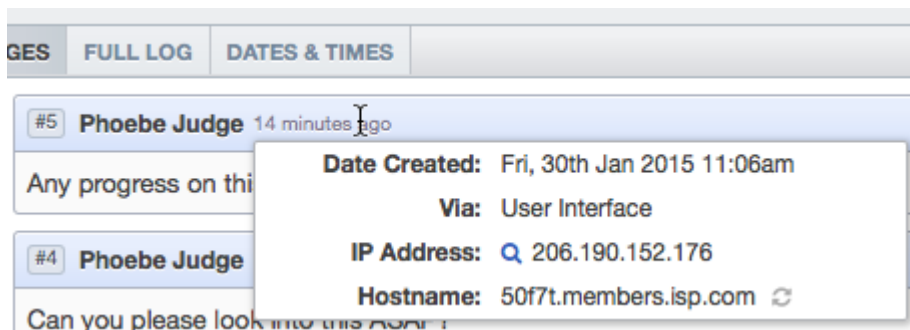

2. Select the options you want:

**DNS Server:** If you are using Deskpro On-Premise on a network/intranet with its own DNS server, you should probably enter the IP address of the DNS server. Otherwise, try the suggested public DNS servers.

**Show Summary:** This enables the display of a Hostnames section on tickets.

If you don't select this, hostname information is only available by mousing over the message age, which is less noticeable to agents:

**Show Summary with Agents:** This selects whether agents are included in the Hostnames section.

3. Click **Save**.

Note that hostname information will only be available for messages that are created *after* you have installed the app.

You can retrieve hostname information for messages in Reports custom reports using `tickets_messages.hostname`. See the [Reports Manual](#) for details of how to create custom reports.
