Question:

When installing Deskpro On-Premise I get this:

	asks such as processing email, running triggers and sending notifications DeskPRO requires that you schedule the <i>cron.php</i> file in er to be regularly run with a cron script (on linux) or a scheduled task (on windows). It is recommend that you run the <i>cron.php</i> file
Edit /etc/cror	ntab to add the following line:
* * * * *	exampleuser /path/to/php /cron.php
	exampleuser" with the user account to run the command with. For example, you might want to run the user with the permissions o server which is typically "www" or "nobody".
We could	not detect the path to PHP. Be sure to use the real path to PHP for your server.

How do I know what the 'real' path to PHP?

Answer:

On Linux, you can execute:

which php

On Windows, enter the path to php-win.exe e.g. C:\Program Files\PHP\php-win.exe.
