DeskPRO Build #43 Released

2012-07-06 - Chris Padfield - Comments (0) - Release Announcements

We are pleased to announce a new release of the DeskPRO helpdesk platform, build #43.

The following is an automatically generated list of changes in this release:

- Fix JS error last is not defined
- Correct default lang sys_name (corrects being able to install on admin)
- Remove add lang button
- Specify temp dir for swiftmailer
- Dont turn off autocomplete for login forms
- Fix 'custom' phrase grouping
- Simplify lang page, fix 'export' showing up as a phrase group'
- Disable non-post logins
- HTTP only cookies please
- Turn off autocomplete for password fields
- Turn off autocomplete for password fields
- Fix padding around password input box
- Fix reply trigger criteria, add default triggers to turn off the auto-response for users
- Remove trailing] character on subjects
- Changes to DetectFilterMatches and NotifyListBuilder to maintain list of affected agents that need to be alerted Usually lists are built around when the the UI needs to be updated (entries in active lists being added or removed). But in cases like being assigned or unassigned, you need the alert regardless of if a ticket is in any list.
- Fix a couple setting names, off-by-one math in omitted messages message
- Correct syntax of phrase with count
- Remove admin/agent po's
- Only work on user for now
- Updated language: Italian - Added 40 phrases

If you are using the cloud version of DeskPRO, your account will have already been updated or will be updated within the next 24-48 hours.

If you are using DeskPRO download, you can update your installation from the admin interface.
