

Language sync

2019-01-09 - Emily Booth - Comments (0) - Product

Included in [Deskpro 2019.1](#) is the release of the latest update to [language](#) feature on Deskpro. This update will now allow your admins to easily and quickly update your installed language packs.

This is done very easily with only a couple of clicks by heading to Setup > Languages and 'Settings & Tools' at the bottom of this page. You will see our new addition at the bottom of the page with a simple drop-down box to select the language that you wish to update or simply update all installed languages, and then press the button 'Download latest language'.

This will be especially useful for anyone currently contributing to the languages packs, but everyone who is using an installed language pack can also visit this page to check on any updates.
