In some cases the trigger choice " is not" is ignored in setting up a trigger in for "Ticket Updated Triggers". This means that a trigger like: "Status" "is not" "Resolved" will show as "Status is Resolved" when the trigger is saved.  $\langle br \rangle \langle br \rangle \langle br \rangle \langle br \rangle \langle br \rangle \rangle$  I have found this to be the case for: $\langle br \rangle \langle br \rangle \langle br \rangle \rangle \langle br \rangle \rangle \langle br \rangle \rangle \langle br \rangle \rangle - SLA \langle br \rangle \langle br \rangle \rangle - SLA Status \langle br \rangle \langle br \rangle \rangle - Urgency (it is translated to "less than" where it should be "is not" "5" for example) \langle br \rangle \langle br \rangle \langle br \rangle \langle br \rangle \rangle I also noticed something going wrong with Usergroup when you create a trigger on the two built-in usergroups (Everyone / Registered). In those cases the the trigger shows --> IF ALL: Usergroup is not Unknow #2. <math>\langle br \rangle \langle br \rangle \langle br \rangle \rangle I don&#039$ ;t need those triggers at the moment but was experimenting with them an noticed it.

Thanks for reporting; we are looking into these and expect to have a solution out tomorrow.

Thanks for reporting. The triggers themselves are fine and work as expected, but I can confirm there is a problem with the descriptions in some cases. This has been fixed for our next update (#303).
