

## How can I have two teams of Agents who can't see each other's Tickets?

Alexandra Mead - 2023-08-17 - [Comments \(0\)](#) - [Ticket Structure](#)

The best way to set this up is by using **Departments** and **Permission Groups**.

- **Departments** are the core organizational structure in Deskpro that allow you to control viewing and access permissions for specific tickets.
- **Permission Groups** are the settings that control what Agents are allowed to see and do in the helpdesk.

You want to create two departments for each of the teams that would need to be separate. For example, if you have two teams 'Support' and 'Sales'. And you want the Support Team to only be able to view Support Tickets, and the Sales Team to only be able to view Sales Tickets. You can create the Department 'Support' and the Department 'Sales'.

Note

These are the default ticket departments in Deskpro when you first create your helpdesk.

To configure Departments, go to **Admin > Ticket Structure > Departments**. Once you have created the Departments, you need to give the two teams permission to view the relevant Departments.

To do this you need to create corresponding **Agent Permission Groups**. Go to **Admin > Agents > Permission Groups**.

Create a Permission Group for 'Support' by clicking the **+ New** button. On the menu, you need to name the Permission Group and select the Agents that will be members of it.

Then select the **Departments** tab, here you will be able to decide the **Permission Group's** access to the helpdesk's **Departments**. For the 'Support' Permission Group, you will want to grant Full Access to the

## 'Support' Department Tickets and Chat.

The image shows two side-by-side screenshots of the 'Edit: Support' settings page. Both screenshots have a title bar with 'Edit: Support' and a close button. Below the title bar are tabs for 'Information', 'Permissions', and 'Departments'. Under 'Departments', there are sub-tabs for 'Ticket' and 'Chat'. The left screenshot has the 'Ticket' sub-tab selected, and the right has the 'Chat' sub-tab selected. Both screenshots show a table with two columns: 'Can assign to' and 'Full access'. The 'Support' row in both tables has both columns enabled (indicated by green toggle switches). The 'Sales' row has both columns disabled (indicated by grey toggle switches). A red box highlights the 'Support' row in both screenshots.

	Can assign to	Full access
Ticket		
Support	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Sales	<input type="checkbox"/>	<input type="checkbox"/>

	Full access
Ticket	
Support	<input checked="" type="checkbox"/>
Sales	<input type="checkbox"/>

Then create a 'Sales' **Permission Group** and repeat these steps.

Once you have done this, when a Ticket is created that is assigned to the Support Department, only those members will be able to see the Support tickets and vice versa.

### Note

The Settings on the Department Permissions, control the level of access the agents will have. If you would like members of one team to be able to assign tickets to another team, but not have access to reply or work on them you can always grant them **Can assign to** permission.

This can be useful in the event a is submitted to the wrong team, then the agent can re-assign it to the relevant team.
