

Number of tickets created this year month by month compared to last year

Matthew Wray - 2023-08-30 - [Comments \(0\)](#) - [Reports](#)

It could be useful to create a report that compares the number of tickets created this year month by month as compared to last year.

To do this, the first part is to generate a report with the number of tickets created monthly for this year, which can be done using the following DPQL format:

```
SELECT DPQL_COUNT() AS 'Number of tickets created this year'
FROM tickets
WHERE tickets.date_created = %THIS_YEAR%
GROUP BY DATE_FORMAT(tickets.date_created, '%M') AS 'Month'
ORDER BY tickets.date_created
```

The second part is to bring in data from last year to compare to this year. This can be done using the LAYER WITH clause, which allows you to combine two different queries into one. The final DPQL is written as below:

```
SELECT DPQL_COUNT() AS 'Number of tickets created this year'
FROM tickets
WHERE tickets.date_created = %THIS_YEAR%
GROUP BY DATE_FORMAT(tickets.date_created, '%M') AS 'Month'
ORDER BY tickets.date_created

LAYER WITH

SELECT DPQL_COUNT() AS 'Number of tickets created last year'
FROM tickets
WHERE tickets.date_created = %LAST_YEAR%
GROUP BY DATE_FORMAT(tickets.date_created, '%M') AS 'Month'
ORDER BY tickets.date_created
```

When this is first created, the default display will be in a 'Table' form. In this case, it would be useful to have it in a 'Lines' and 'Bars' display, to have a visual representation of the data. To customise the form of content displayed, go to the 'Display' drop-down list that is located on the just below the title.

The screenshot shows a 'Display' dropdown menu. The word 'Display' is on the left. To its right is a box containing two buttons: 'Bars' and 'Lines'. Each button has a small 'x' icon to its left. To the right of the box is a close button (an 'x') and a dropdown arrow (a triangle pointing down).

The resulting display will be as shown below:
