Why are some automatic Replies added as an Agent Note?

Lewis O'Connor - 2023-08-29 - [Comments \(0\)](#) - [Admin](#)

Some automatic email responses will get added to the Ticket Thread as an Agent Note so that the automatic reply does not affect the status of the ticket (e.g. changing it from Awaiting User to Awaiting Agent).

The screenshot shows a ticket thread interface with two tabs: "Messages" and "History". The "Messages" tab is active. The thread contains two items:

- AGENT NOTE:** A purple box with a white border. It contains the text "I will be away from the office for the rest of today." The note is timestamped "11 mins" and "#2". It has a user icon "JH" in a circle.
- EMAIL:** A yellow box with a white border. It contains an email message. The "To:" field is "Joe Hancock (j.hancock@deskpro.com)". The body of the email says "Hello Joe," followed by "I hope that we have been able to help you with your query, but if there is anything else that we can do to help, please get in touch." and "Kind Regards,". The email is timestamped "12 mins" and "#1". It has a user icon of a man's face.

In order for the reply to be recognized in this manner, the subject of the reply must contain certain prefixes (which is why this won't be the behavior for all automatic replies).

Deskpro currently looks for the following prefixes:

- Delivery Status Notification <original subject>
- Undeliverable: <original subject>
- Out of Office: <original subject>
- Automatic reply: <original subject>
- Out of Office AutoReply: <original subject>
- Autosvar: <original subject>
- Recall: <original subject>
